12. Note the attached Information Disclosure Statement(s). (PTO/SB/08) Paper No(s).

Continuation of 11. does NOT place the application in condition for allowance because: The rejection under 35 U.S.C. 102(a) is maintained newly submitted claim 62 for the reasons set forth on pages 2-6, paragraph 3 of the Final Office Action.

Applicant's Arguments

Applicant urges that the sequence alignment of SEQ ID NO.23 and SEQ ID NO.44 of Masignani et al only reveals 86% identity over the entire, wild-type sequences and alignment of SEQ ID Nos 35 and SEQ ID No.4 of Masignani et al only reveals a 77% identity over the entire, wild-type sequences. Applicant urges that Masignani et al do not disclose an isolated protein having at least 90% identity to SEQ ID Nos.23 and 35. Applicant urges that Masignani et al disclose a fragment or sub-region to an isolated protein which was not identified explicitly in Masignani et al.

Examiner's Response to Applicant's Arguments

Newly submitted claim 82 is directed to an isolated protein having at least 90% sequence identity to SEQ ID No:23 or SEQ ID NO. 35, wherein the isolated protein is a deletion mutant of a wild-type NhhA polypeptide and wherein the isolated protein is immunogenic. As stated in the Final Office action mailed 11/26/08, Masignani et al teach a N. meningitidis protein ORF40-1 protein (SEQ ID NO:4) that has the amino acid sequence that is 98.1% identity to SEQ ID NO:29. Masignani et al teach a N. meningitidis protein ORF40-1 protein (SEQ ID NO:4) that has the amino acid sequence that is 99.3% identity to SEQ ID NO:35.

It should be noted that the claim is directed to proteins that have at least 90% sequence identity to SEQ ID Nos. 23 and 35 and not over the entire wild-type protein sequence.

In view of all of the above, this rejection is maintained.

The rejection under 35 U.S.C. 102(a) and 102(e) are maintained newly submitted claim 62 for the reasons set forth on pages 6-12, paragraphs 4 and 5 of the Final Office Action.

Applicant's Arguments

Applicant urges that an alignment of SEQ ID No. 23 and SEQ ID No. 20 of Peak et al reveal 86% identity over the entire, wildtype sequences and an alignment of SEQ ID No. 35 and SEQ ID No. 2 of Peak et al reveal 86% identity over the entire, wildtype sequences. Applicant urges that and Peak et al do not disclose an isolated protein having at least 90% identity to SEQ ID Nos. 23 and 35. Applicant urges that Peak et al disclose a ragment or sub-region to an isolated protein which was not identified explicitly in Peak et al.

Examiner's Response to Applicant's Arguments

Newly submitted claim 62 is directed to an isolated protein having at least 90%, sequence identity to SEQ ID No.23 or SEQ ID No. 35, wherein the isolated protein is a delation mutant of a wild-type NhhA polypeptide and wherein the isolated protein is immunoquenic. As stated in the Final Office action mailed 11/26/08, Peak et al teach proteins from Neisseria meningitidis and pharmaceutical compositions containing the polypeptide (see the Abstract and pages 34-40,) Peak et al teach a N. meningitidis protein (SEQ ID NO:21) that has the amino acid sequence that is 98.1% identity to SEQ ID NO:35.

It should be noted that the claim is directed to proteins that have at least 90% sequence identity to SEQ ID Nos. 23 and 35 and not over the entire wild-type protein sequence.

In view of all of the above, this rejection is maintained.

Claims 33-34, 49-52, 54-55 and 57-61 are free of the cited art.
